

## *A prestigious Honor and An outstanding recognition*

On Thursday March 25, Nuvolt Corporation received the **LAUREATE** for its technology SMARTSCAN in the category TELECOMMUNICATION & NEW TECHNOLOGY at the evening of the 2010 Leonards; an annual major event related to the Grand Prizes of the Quebec Engineering Consultants Association "Grand Prix du Génie Conseil Québécois".

This award is major in terms of visibility and credibility since the members of the jury are highly reputable Engineers and famous Architects. Our technology was sponsored by BBA, a well known Engineering consultant group in Canada, which has participated in the concept of the **SMARTSCAN**. This is a very important recognition of our know how by a highly selective group.

There were as many as 50 finalists in 11 different categories. We were selected as one of two finalists in our group classification before

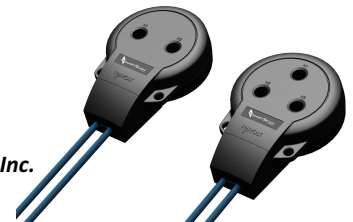

winning the competition, the other finalist being Desseau, an important electrical engineering consultant group that was presenting a real time operation management system for city buses.

From Left to Right, Mr. Raymond Snow (Sales Director Autodesk Canada), Mr. Steeve Fiset (President BBA), Mr. Jean-Marc Tremblay (Project Director BBA), Mr. Jacques Dion (President Corporation Nuvolt Inc.)

*"We are very proud of this honor and we would like to share it with our employees, customers and investors."*

*Mr. Jacques Dion, President of Nuvolt Corporation Inc.*
