## **PRESS RELEASE**

### **NUVOLT CORPORATION INC. ANNOUNCES SUCCESSFUL COMPLETION OF THE R&D PHASE FOR ITS FIRST GENERATION NUVOLT SENSOR**

Levis, October 3, 2008. Mr. Jacques Dion, President and CEO of Nuvolt Corporation Inc. (TSX-V: NCO), is pleased to announce that the R&D phase for the first generation NUVOLT SENSOR is a success.

The NUVOLT SENSOR is a cutting-edge technology that allows continuous analysis of electric wave directly at the circuit breaker in order to identify any malfunction in the power grid, pinpoint its origin, determine how serious the problem is and, if necessary, initiate load shedding. The technology is being implemented in a power grid monitoring system that is currently at the validation phase on two (2) commercial sites.

The power grid monitoring system embeds the NUVOLT SENSOR technology and expands on a global scale. It can be used for many different commercial applications, especially to monitor electrical grids in the agricultural and commercial real estate markets and to allow preventive maintenance of industrial production lines.

"This outstanding technological breakthrough, achieved in partnership with BBA, concludes the first development phase of our business plan, as announced during the public offering on the TSX Venture Exchange back in July 2007", said Mr. Jacques Dion, President and CEO of Nuvolt Corporation Inc.

"Nuvolt is now going forward with the second phase of its business plan, i.e. closing commercial distribution agreements in the agricultural industry. Marketing is planned for the beginning of 2009", said Mr. Dion.

#### **About BBA**

BBA is an engineering consultant firm with nearly 500 employees that offers services and expertise in the energy, mining and metallurgy sectors. Its fields of expertise include electrical, civil and mechanical engineering, mining engineering and metallurgical processes, automation, control and optimization of processes, as well as network studies, tests and start-ups.

#### **About Nuvolt Corporation Inc.**

Nuvolt Corporation is specialized in monitoring electrical networks in livestock farm facilities. Its products are used to detect, analyze and neutralize leakage current present in the animal's environment and to notify user of network failure, at any frequency.

Its main products are the "Potential Equalizer", the "Relax" ground fault detector and SVF-VSD filters to eliminate harmonics. They are presently in use on dairy and pig farms.

**Nuvolt Corporation** holds patents on products and technology serving its current markets and patents are pending on products aimed at serving not only farms but also electrical network monitoring of residential, commercial, institutional and industrial markets.

The TSX Stock Exchange does not accept responsibility for the relevance or accuracy of this press release.
